REVIEWER COMMENTS TO AUTHOR

1) The subject matter is accurate, current and complete. (No): The reasons for conducting a study to examine the concepts or research variables are unclear and not complete.

2) Whether appropriate references and resources are listed. (Yes): - With improvement
   In the document:
   Tversky and Kahneman (1979) state that emotion due to loss is experienced twice as strongly as emotion when gaining profit.

   In References:

3) The information is organized in a logical and appropriate format for the intended audience: (Needs improvement): Additional comments in the table below.

4) Illustrations are suitable for clarification and/or attractiveness: (Needs improvement): Additional comments in the table below

5) Accurate and complete instructions/information are given. (Needs improvement): Additional comments in the table below

6) Do you recommend this paper for publication? (Recommend with minor revision)

<td>Rearrange the background/introduction with the following systematics: 1) Demonstrate the relevance of the study; 2) Show the lack of entrepreneurial intentions in developing countries with empirical data; 3) Review for some determinants of entrepreneurial intention from previous research. Give an explanation that risk and loss averse are important concepts and still need to be tested as the determinants of entrepreneurial intention. At least, it should be pointed out that there are still gaps in research findings or differences in empirical models with theoretical models; 4) Finally, explain the</td>

3. **Literature Review and Hypotheses Development**
   a. No Revision
   b. **Minor Revision**
      1) Enlarge the Literature review by about 2 times.
      2) It is recommended to use the theoretical basis for developing research model.
      3) The hypotheses should be formulated in this section, because you use the t-test in the next section.
   c. **Major Revision**

4. **Methods**
   a. No Revision
   b. **Minor Revision**
      Rearrange and explain with the following systematics:
      1) Sample and Data Collection
      2) Variable and Measurement
      3) Data Analysis
   c. **Major Revision**

5. **Result and Discussion**
   a. No Revision
   b. **Minor Revision**
      Rearrange with the following systematics:
      1) Results:
         a) Measurement
         b) Empirical model
      2) Discussion
   c. **Major Revision**

6. **Conclusion and Implications**
   a. No Revision
   b. **Minor Revision**
      Rearrange with the following systematics:
      1) Theoretical implication
      2) Managerial implication
      3) Limitation
   c. **Major Revision**

7. **List of Reference**
   a. No Revision
   b. **Minor Revision**
      Needs improvement (See the guidelines below)
   c. **Major Revision**

8. **Other Revision**
   a. Total number of words in article between 3000 to 6000 excludes tables, figures, and references
   b. **Improve the citation source writing in document.** Examples:
      - According to Carland and Carland (1999), .......
      - ...... (Carland & Carland, 1999).
      - For three or more authors simply write the name of the first author followed by et al. and year, e.g.: Carland et al. (1984) .............. or .................(Carland & al., 1984)
   c. **Major Revision**

**REFERENCES**
References should be entitled “References,” and should be a “Heading 3” highlight. Remove tabs, or hard returns, or other attempts to format your references, then highlight the entire group of references. Click on 10 point type in the Home tab, then drag the upper triangle in the ruler bar to the left margin, and drag the lower triangle in the ruler bar to the one half inch position. This will create a hanging indent.

References should be prepared in general accordance with the APA (American Psychological Association). We do deviate from APA style with respect to underlines. These do not reproduce well, consequently, we ask that you use italics in place of underlines. Single space between references and do NOT use underlining ( ____ ) at the beginning of a reference as a shortcut. In fact, do NOT use underlining anywhere in the document.

Below are some examples of different citations. Please note that if you have a break problem because of a website, you should manually choose a break point by inserting a space into the citation.
